Art Unit: 2616

1. Applicant's arguments, see remark in the amendment after final, filed April 19, 2006, with respect to the rejection under 35 U.S.C. 112, first paragraph have been fully considered and are persuasive. The finality of previous office action has been withdrawn.

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 2-11, 13-23 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted step is: recursive calculating/updating load level step after step of calculating an initial load level as in independent claims 2, 3, 5, 6, 13, 14, 16 and 17. To be more specific, according to specification disclosure, page 3, lines 22-28, it states that "the present invention is a call admission controller of a wireless network base station, such as a CDMA base station, which **utilizes multiple load level estimating methods**, whereby a **first load level estimating method generates an initial load level estimate, and at least one additional estimating method recursively generates updated load level estimates as a function of changes in the number of users and/or changes in base station receive power**".

However, in all independent claims, only the step of calculating an initial load level was recited, which is improper and insufficient for carrying out the step of controlling call admission since the call admission control cannot be based on the calculated initial load level alone. It requires an essential step of recursively calculating/updating load level for controlling the call admission as claimed.

4. In view of the above rejection regarding 112, second paragraph problem, no prior art rejection can be applied at this time.

Art Unit: 2616

5. Claims 4, 7, 8, 10, 11, 15, 18, 19, 21 and 22 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ishikawa et al., Lee et al., and Rumsewicz et al. are additionally cited to show the common feature of call admission control scheme similar to the background of the claimed invention.

Liew is additionally cited to show the method for recursively update the effective bandwidth in call admission control system utilizing recursive steps similar to the claimed invention.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alpus H. Hsu whose telephone number is (571)272-3146. The examiner can normally be reached on M-F (5:30-3:00) First Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wellington Chin can be reached on (571)272-3134. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
